A little face needs **big comfort**

Philips Respironics PN841 pediatric noninvasive ventilation mask

While adult ventilation masks have advanced over the years to become smaller, lighter, and less intrusive, pediatric masks have lagged behind. The PN841 pediatric nasal mask is different. It was designed with children in mind, with a convenient leak correction dial, child-friendly fabric patterns, and a range of sizes to provide a positive experience for your pediatric patients.

Made for your pediatric patients

It's the mask with modified cushion curvature for small faces. The PN841 nasal mask has a cushion, frame, and headgear that are designed for the specific sizing and bone structure of pediatric patients.

Big advances for little faces

The PN841 pediatric nasal mask has thoughtful touches to enhance the comfort and performance of the mask for your youngest patients.

- Available in three cushion sizes: small, medium, and large
- Features click-fit headgear clips with adjustable straps for quick and easy fitting and adjustment
- Provides an open line of sight for patients
- Accommodates patients greater than 10 kg (22 lbs)

The convenient **leak correction dial** lets clinicians fix small leaks, gently readjusting the fit of the cushion without the need to remove the mask or wake the patient.

Jacky Giraffe and friends are ready to help

Patients and their parents can view this animated cartoon on the Philips Respironics YouTube channel. Jacky and friends are designed to help ease patient concerns about noninvasive ventilation and promote acceptance of the mask.
